

FIND-build-infra-CVE-2024-1086

CVE-2024-1086 — Linux kernel netfilter nf_tables use-after-free privilege escalation

MEDIUM

Ubuntu 22.04 LTS 5.15.140 · os · Local access required · prod priv_esc

SCHEDULE FOR PATCH TRAIN

Priority: 4.6 / 10

INTEL SIGNALS			RATIONALE	REQUIRED ACTIONS
Signal	Value	Applied Score Δ	• Reachability is 'internal'; constrained attack surface reduces urgency. • Strong exploit-relevant mitigations evidenced with causal claims.	→ Schedule on next patch train.
CVSS	7.8 v3.1	✓ +3 . 12		
CISA KEY	Listed	✓ +1 . 5		
EPSS	98th pct	△ +0 . 5		
Reachability	internal	— +0 . 5		
Utility	HIGH	✓ +0 . 5		
Mitigations	strong	✓ -1 . 5		

MITIGATIONS

acl_segmentation — Build systems accessible to internal team only (4 core engineers). SSH/git access restricted to trusted users.

✓ *Privilege escalation requires prior local access; restricted access to 4 trusted users materially reduces threat surface.*

other — SELinux and ASLR/DEP enforced and verified by periodic audit.

✓ *SELinux and ASLR/DEP constrain what a process can do after escalation, limiting post-compromise impact.*
